Cambridge, Massachusetts - 02139

INTRODUCTION

I am a senior at MIT majoring in mathematics. My current interests are in algebra and number theory.

EDUCATION

• **Massachusetts Institute of Technology**   *2022 - Present*
Undergraduate   Cambridge, MA
  ◦ GPA: 5.0/5.0.

• **Christian Heritage School**   *2018 - 2022*
High School   Trumbull, CT

AWARDS

• **Hartley Rogers Jr. Prize**   *August 2024*
MIT   [link]
  ◦ Awarded for the best paper in the Summer Program in Undergraduate Research (SPUR).

ACTIVITIES

• **Undergraduate Research Opportunities Program Plus (UROP+)**   *June 2025 - August 2025*
MIT   [link]
  ◦ It was conjectured that a binary sequence satisfying certain conditions is the X-ray of a permutation matrix. My mentor Yannick Yao and I proved a weaker statement: under the same constraint, the sequence is the X-ray of a doubly stochastic matrix.

• **Undergraduate Research Opportunities Program (UROP)**   *2025*
MIT   [link]
  ◦ In his paper, Professor Victor Kac showed that the quiver problem is in NP. In this UROP, Professor Victor Kac and I proved that the quiver problem is NP-complete.

• **PRIMES-USA (mentor)**   *2024*
MIT   [link]
  ◦ Working with Felix Gotti, we mentored three students and produced a paper titled *On finitary power monoids of linearly orderable monoids*.

• **Summer Program in Undergraduate Research (SPUR)**   *June 2024 - August 2024*
MIT   [link]
  ◦ Working with Luis Modes, we generalized a result from $K = \mathbb{Q}$ to any number field with class number 1.

• **Directed Reading Program (DRP)**   *January 2024*
MIT   [link]
  ◦ Read the book *Primes of the Form $x^2 + ny^2$* by David Cox and gave a presentation at the end of DRP.

• **Joint Mathematics Meetings**   *January 2024*
San Francisco   [link]
  ◦ Gave a presentation titled *Hereditarily Atomicity, Underatomicity, and ACCP*.

• **Conference on Rings and Factorizations**   *July 2023*
University of Graz   [link]
  ◦ Gave a presentation titled *Divisibility and a weak ascending chain condition on principal ideals*.

• **CrowdMath**   *2022*
Art of Problem Solving   [link]
  ◦ Worked on additive structure of $\mathbb{N}_0[\alpha]$ and produced a paper titled *Factorization in additive monoids of evaluation polynomial semirings*.

• **PRIMES-USA (mentee)**   *2021*
MIT   [link]
  ◦ Mentored by Felix Gotti, we produced several papers, including *Divisibility and a weak ascending chain condition on principal ideals*, *On the primality and elasticity of algebraic valuations of cyclic free semirings*, *Atomic semigroup rings and the ascending chain condition on principal ideals*, and *Divisibility in rings of integer-valued polynomials*.

MATH COURSES TAKEN $\hspace{2cm}$ F=FALL TERM, S=SPRING TERM

All courses taken after 2022 Fall (inclusive) are at MIT.

- **2025 F:** 18.155 Differential Analysis I
- **2025 F:** 18.965 Geometry of Manifolds I
- **2025 S:** 18.102 Intro to Functional Analysis
- **2025 S:** 18.737 Algebraic Groups
- **2025 S:** 18.821 Project Lab in Mathematics
- **2024 F:** 18.745 Lie Groups and Lie Algebras I
- **2024 F:** 18.785 Number Theory I
- **2024 S:** 18.786 Number Theory II
- **2024 S:** 18.906 Algebraic Topology II
- **2023 F:** 18.101 Analysis and Manifold
- **2023 F:** 18.783 Elliptic Curves
- **2023 F:** 18.905 Algebraic Topology I
- **2023 S:** 18.152 Intro: Partial Differential Equations
- **2023 S:** 18.726 Algebraic Geometry II
- **2023 S:** 18.901 Introduction to Topology
- **2022 F:** 18.112 Functions of Complex Variable
- **2022 F:** 18.725 Algebraic Geometry I
- **2022 S:** MATH603 Introductory Topics in Representation Theory, Professor Ivan Loseu, at Yale
- **2021 F:** Reading Group, *Commutative Algebra with a View Toward Algebraic Geometry* by David Eisenbud, at Yale
- **2021 S:** MATH353 Introduction to Representation Theory, Professor Congling Qiu, at Yale
- **2020 F:** MATH380 Modern Algebra I, Professor Ivan Loseu, at Yale

BOOKS READ (FULLY OR PARTIALLY)

- *Basic Topology*, M.A. Armstrong
- *Algebra*, Michael Artin
- *Linear Algebra Done Right*, Sheldon Axler
- *The Calculus Lifesaver*, Adrian Banner
- *Primes of the Form* $x^2 + ny^2$, David A. Cox
- *Commutative Algebra with a View Toward Algebraic Geometry*, David Eisenbud
- *Algebraic Curves*, William Fulton
- *Surreal Numbers*, Donald Knuth
- *Thirty-three Miniatures: Mathematical and Algorithmic Applications of Linear Algebra*, Jiri Matousek

- (Note) *Algebraic Geometry*, J.S. Milne
- (Note) *Algebraic Number Theory*, J.S. Milne
- (Note) *Field and Galois Theory*, J.S. Milne
- (Note) *Group Theory*, J.S. Milne
- *Algebraic Curves and Riemann Surfaces*, Rick Miranda
- *Visual Complex Analysis*, Tristan Needham
- *Lie Groups and Algebraic Groups*, A.L. Onishchik and E.B. Vinberg
- *A Course in Arithmetic*, J-P. Serre
- *A Friendly Introduction to Number Theory*, Joseph H. Silverman
- *Complex Analysis*, E. Stein
- *Fourier Analysis*, E. Stein
- *Real Analysis*, E. Stein
- *A Course in Algebra*, E.B. Vinberg
